NitiVimarsh

Invites you to a Webinar on

Making Sense of Bitcoin, Cryptocurrency and Blockchain

The talk discusses the blockchain technology, Bitcoin and other essential cryptocurrencies, and the debates surrounding them.

Blockchain was first introduced to facilitate Bitcoin, a virtual currency constructed using cryptographic principles and conceived by the proof-of-work mechanism in a distributed and decentralised environment; hence, also called cryptocurrency. Bitcoin's mysterious inventor Nakamoto delivered the process of moving money virtually that was previously impossible. This ability of Bitcoin made it one of a kind and introduced a new branch of technology.

Blockchain and Bitcoin have been the subject of much debate in recent times both in and outside the scientific community regarding what can and cannot be done using them. The world seems to get divided into two while discussing blockchain and bitcoin. In the talk the speakers discuss some of these debates.

Mr Agnelo Marques

Head - Blockchain
CoE, Mphasis

Dr Niaz Chowdhury

Research Associate
The Open University
Milton Keynes, England

NitiVimarsh, an initiative of the Centre for Society and Policy (CSP) at the Indian Institute of Science, is a platform for S&T conversations around policy, philosophy and policy design.
